

1. Presence detection of felt label on a backlight shelf

The presence of a felt label on a rear window shelf should be checked. For this purpose a color sensor type **SPECTRO-3-80-COF-d20.0-JR** is used. The distance of the sensor to the rear shelf is approximately 50mm and the detecting range around 15mm in diameter. The felt label can be properly detected as shown in the screen shots.
