N°780 SPECTRO-3 series

1. Meshes control on fabric hoses

The meshes of a braided hose should be controlled. For this purpose, a color-fluorescent sensor type **SPECTRO-3-30-UV/BL-MSM-ANA** is used. At this, the distance from the sensor to the fabric hose is approximately 30mm and the detecting range at this distance is around 15mm in diameter. The differences in meshes of braided hoses can be proper detected as shown in the screen shots.
