

### 1. Edge detection on paper bags and corrugated boards

The edges on scaled transported and folded paper bags as well as corrugated boards should be detected. For this purpose, an edge detector type **RED-200-P** is used. At this, the distance from the sensor to the object is approximately 220mm and the laser spot size at this distance is around 0.2mm in diameter. The edges can be proper detected as shown in the screen shots.
