

1. Plastic cap color measurement

The color of plastic caps should be measured. For this purpose, a color sensor type **SPECTRO-3-28-45°/0°-MSM-DIG-DL** is used. At this, the distance from the sensor to the plastic cap is approximately 28mm and the detecting range at this distance is around 15mm in diameter. The color can be properly measured, as shown in the screen shots.
