

1. Gloss measurement of transparent plastic films

The gloss factor of different transparent plastic films should be measured on both sides. For this purpose a gloss sensor type **RLS-GD-15/60°** is used. At this, the distance from the gloss sensor to the object is 15mm and the spot size around 18mm x 36mm, elliptical in shape. The gloss factor can be properly measured as shown in the screen shots.
