

**1. Color sensor with 8 – pin M12 connector, three analog outputs, a digital input and an optical fiber connector for plastic fibers: SPECTRO-3-POF-SLA**

The color sensor **SPECTRO-3-POF-SLA** is equipped with an 8 – pin M12 connector, three analog outputs (0V ... +10V or 4mA ... 20mA, can be selected via the digital serial bus) and a digital input. The optical fiber connector offers the possibility to connect standard plastic fibers with an outer diameter of 2.2mm, thus a huge program of optical frontends is available.
