

1. Two channel optical fiber sensor type SPECTRO-2-FIO-(UV/VIS)/(UV/VIS)

The two channel optical fiber sensor type **SPECTRO-2-FIO-(UV/VIS)/(UV/VIS)** comes with two UV LEDs (main wavelength 375nm). Furthermore the system is equipped with two detectors, sensitive in the visible range. The sensor is used especially for UV fluorescent objects. Two channels can be controlled and compared simultaneously.
