1. Fluorescent color sensor with analog and digital outputs: SPECTRO-3-FIO-UV-ANA

The **SPECTRO-3-FIO-UV-ANA** is equipped with three analog outputs for RGB, siM as well as xyINT, selectively and with two digital outputs (for three colors). There is an UV-LED used as a lightning source, additionally to this there is an external super bright UV-LED type **SPECTRO-ELS-UV** available. At this, the UV types from the FIO series can be used. The sensor can be monitored and parameterized via the Windows® software **SPECTRO-3-ANA-SCOPE V1.0.**
