

1. Color sensor SPECTRO-3-SL

The color sensor **SPECTRO-3-SL** is the most compact and cheapest type within the SPECTRO-3 family. The sensor comes with two digital outputs, which allows teaching up to three colors or three groups with maximum 31 colors. The **SPECTRO3-SL-Scope V1.0** Windows® software is similar to the SPECTRO-3-Scope V4.1. The sensor can be connected to the PLC with a 4-pin M8 standard cable. For the connection to the PC the same cable is used as for the standard SPECTRO-3 sensors.
