

1. Color gloss sensor SPECTRO-3-FCL-SL

The color gloss sensor **SPECTRO-3-FCL-SL** is used for the differentiation of objects with a view to the color and the gloss. Thus, objects with the same color but a different gloss as well as objects with the same gloss and a different color can be distinguished. The distance of the object to the sensor lays in the range of 10mm up to 100mm and the spot size and the detecting range is dependent of the distance to the object.
