

### 1. Fast control electronics AGL4-HS for the A-LAS series

The **AGL4-HS** amplifier comes with a switching frequency of around 500kHz and an analog bandwidth of approximately 500kHz (-3dB). Furthermore, the control electronics is equipped with an additional LED which can be used for a fast and proper adjustment of the transmitter to the receiver unit. Laser through beam sensors from the A-LAS series can be connected to the AGL4-HS control electronics.
