

1. Laser line scan through beam sensor type L-LAS-TB-14-T/R-CL

The transmitter of the laser through beam sensor type **L-LAS-TB-14-T-CL** comes with a parallel laser light curtain of approximately 16mm x 5mm and the receiver **L-LAS-TB-14-R-CL** has a detecting range of around 14mm. The resolution of the sensor system is 2µm and it can work up to a transmitter/receiver distance of 5m.
