

1. Laser line scan through beam fork sensor type L-LAS-TB-F-6x1-40/40-CL

The laser line scan through beam sensor **L-LAS-TB-F-6x1-40/40-CL** comes with a parallel laser light curtain with a height of 6mm and a width of 1mm, furthermore the transmitter/receiver distance is 40mm and the depth of the fork is 40mm, too. At this, the resolution of the sensor is around 2 μ m and the repeatability is approximately 4 μ m.
